## Flea checklist

### Prior to our visit:

- Block off openings that mice, rats, squirrels, or cats could use to get under your house or in your attic
- Take your pet to the veterinarian to be treated before or during our visit. Your pet can't come back into the house until 2 hours after we leave
- Wash your pets' bedding in hot water and dry in the dryer, if possible
- Wash all sheets in hot water
- Remove all toys, pillows, clothes, etc. from the floor, especially under beds and on closet floors. We need access to as much carpet as possible.
- THOROUGHLY** vacuum all carpets and rugs, especially where the floor meets the wall
- THOROUGHLY** vacuum all sofa and chair cushions (all sides)
- IMMEDIATELY** take the vacuum outside, remove the bag, and either burn it or seal it in a plastic bag in a garbage container away from the house
- Remove all pets from the home
- If you have a fish tank, unplug the motor (it won't be necessary to remove the fish)

### After our visit:

- You and your pet(s) may re-enter your home 2 hours after we treat
- Open windows and doors for a few minutes if you detect an odor
- Vacuum daily for at least a week (possibly 2 weeks) and dispose of the vacuum bag as advised above
