www.SunPest.com

Sun Pest Management is proud to work with your property manager or landlord to make sure your living environment remains safe and healthy. If we're coming to treat your home or apartment, this handout is designed to tell you how you can help us provide the quickest solution to your pest problem.

Your responsibilities:

- Whether the problem is ants, spiders, mice, bed bugs, cockroaches, fleas, or other creepy-crawlies, the floors of your place need to be clean
- Vacuum along all walls (even behind sofas!).
- Clean the kitchen floors thoroughly, and remember to get behind the fridge and under the oven drawer.
- Don't leave debris under the sink. Throw away those old plastic bags and tidy up all the crumbs (Cockroaches, mice and ants LOVE that stuff!).
- Leave plenty of wall access through the entire place. Often, we'll need to spray the interior perimeter. To do so thoroughly, we may need to get into your closet and behind your bed, too.
- The problem isn't always due to hygiene; ants are commonplace, as are mice. However, the less your house smells of food, and the cleaner the kitchen remains, the better off you'll be.
- Most of the critters listed above thrive in kitchens that could be a little cleaner, but not always. We'll give you some pointers while we're there.
- If we need to fog your home, you won't be able to return for at least 2 hours.
- If you have a fish tank, please unplug it and cover it with a towel.

If you have questions or would like to know more about how we'll treat your residence, please contact us at 800.422.4803.
